

The most recent release of Conference includes many new front-end enhancements, but is also replete with back-end optimizations to ensure higher levels of scalability for our largest events. Headlining the release is an entirely-new registration interface as well as a newer, faster caching system to increase the speed of our applications. As we prepare for the next-generation of events and functionality in forthcoming releases, the core improvements completed for the 5.2 release will serve as the foundation for those new features.

New Registration Interface

The entire public registration interface has been re-designed for a fresh, clean and intuitive look. Inline field validation streamlined look-and-feel and improved icon sets have taken our powerful online registration system to the next level.

General Changes

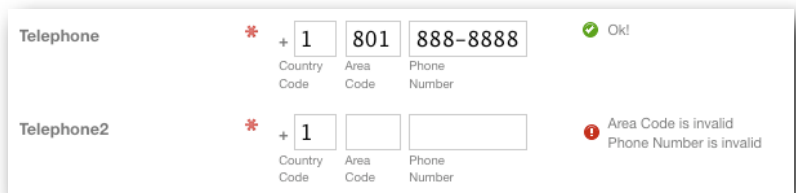

1. Smaller step indicators
2. Larger input boxes
3. Inline validation icons with help text

Configurable Phone Fields

1. International (shown)
2. Standard: Single field

Ensures phone standards are enforced for text messaging.

My Account

1. User account re-organized
2. New icons
3. Proxy reg management simplification

SMS Messaging

Phase I of this new offering takes real-time polling to the next level. Allow your keynotes to display Adobe Flash-based graphs that display results based on real-time text voting.

Enhanced VAT Support

As our product expands worldwide, VAT support has followed. These enhancements better enable event owners to manage VAT rules for exhibitors and attendees to be in compliance with local regulations.

WingateWeb EventInsight Improvements

Our integrated Web analytics offering, powered by Omniture SiteCatalyst, has been enhanced and expanded to include more tracking variables as well as survey completion metrics to better understand survey completion.
