

WingateWeb Event Console 3.0 Highlights

Introduction

First introduced in winter 2005, the WingateWeb Event Console has continued to evolve at a rapid pace. Now just over two years after its introduction, the Event Console marks a major milestone with an entirely new user-interface and market-leading functionality.

Event Console 3.0 is the premiere multi-event management platform on the market. With thousands of hours of development and increasing enterprise and mid-market adoption, the Event Console represents the next phase of enterprise event management.

Highlights of this release include:

1. Entirely new user-interface
2. Dynamic search
3. Attendee nomination tool

Not just an online registration platform, the Event Console also manages scheduling, content lifecycle, partners, exhibitors, badge creation, reporting and much more.

Event Console 3.0 is currently available and launched Sept 12, 2007.

Top Features of This Release

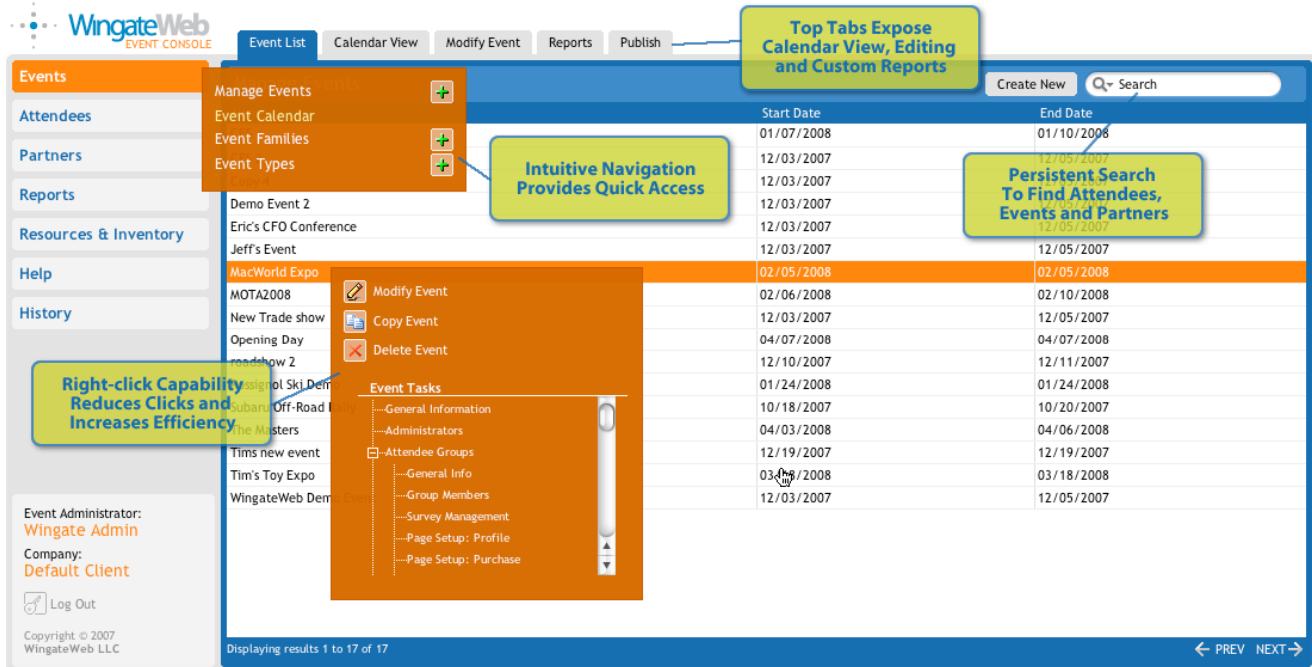

1. Completely New User-interface
 - a. The already dynamic interface has been completely re-designed with ease-of-use and productivity in mind. The new design is cutting-edge and continues to provide advanced, Web 2.0-style functionality such as:
 - i. Context-sensitive right-click tools to provide quick access to advanced actions on any record in the system.
 - ii. Quick loading pages and queries
 - iii. Intuitive content and task layering to prevent multiple or conflicting pop-up windows.
2. Dynamic Search
 - a. We have drastically improved the speed of searching for attendees, events and partners in the system by employing a little touch of Mac OSX-style functionality into the application. Upon entering a single character, the list is filtered in a split-second. Search results no longer require a “click and wait” scenario—just type your query and the results begin to appear on-demand.
3. Nomination Tool
 - a. Most organizations have limited budgets or inventory to send employees to training or incentive programs. To manage this fairly, we have built a nomination tool into the Event Console, which allows managers to suggest attendees and executives (or other designee’s) to approve or deny their attendance.

Additional Features in This Release

Below are additional features built into this release:

1. Scheduled Email Templates
2. Session Monitoring Integration
3. Check-in and Badge Printing Application
4. Hotel Change Report and Credit Card Reports
5. Ability to BCC and CC on Any Email
6. Ability to Set Session Capacity
7. Integrated Hotel Registration
8. Scheduled Reports
9. Printer-friendly Session Schedule
